Primary Substrate specificity of recombinant human stratum corneum RT "Primary Substrate specificity of recombinant human stratum corneum RT chymotryptic enzyme.";

RL BIOCHEM. BIOPHYS. RES. COMMUN. 211:586-589(1995).

CC -!- FUNCTION: MAY CATALYZE THE DEGRADATION OF INTERCELLULAR COHESIVE STRUCTURES IN THE CONNIFIED LAYER OF THE SKIN IN THE CONTINUOUS CONSIDERS WITH AROMATIC SIDE CHAINS IN THE PROSITION. SCCE CLEAVES INSULIN B CHAIN AT 6-LEU-1-CYS-7, 16-TYR-1-LEU-17, 25-PHE-1-TYR-25, AND 26-TYR-1-THR-27. COULD PLAY A ROLE IN THE ACTIVATION OF PRECURSORS TO INFLAMMATORY CYTOKINES.

-!- TISSUE SPECIFICITY: IT IS ABUNDANTLY EXPRESSED BY KERATINOCYTES IN THE EPIDERMIS. VERY LOW LEVELS ARE ALSO SEEN IN THE BRAIN AND KIDNEY.

-!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1; ALSO KNOWN AS THE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        seq_name: SwissProt_37:SCCE_HUMAN

-I- FUNCTION: GLANDULAR KALLIKREINS CLEAVE MET-LYS AND ARG-SER BONI IN KININOGEN TO RELEASE LYS-BRADYKININ.

-I- CATALYTIC ACTIVITY: PREFERENTIAL CLEAVAGE OF ARG-|-XAA BONDS IISMALL MOLECULE SUBSTRATES. HIGHLY SELECTIVE ACTION TO RELEASE KALLIDIN (LYSYL-BRADYKININ) FROM KININOGEN INVOLVES HYDROLYSIS MET-|-XAA OR LEU-|-XAA.

-I- SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1: ALSO KNOWN AS THE TRYPSIN FAMILY. BELONGS TO THE GLANDULAR KALLIKREIN SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PETERS J., TAKAHASHI S., TADA M., MIYAKE Y.;
